

EB tresos Studio - application note

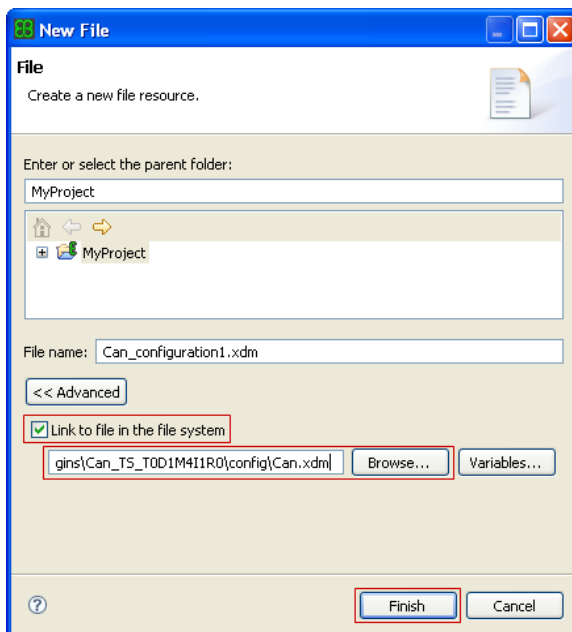

Applies for: EB tresos Studio from version 12 on (team collaboration)

Use case: comparing and merging *two arbitrary* XDM files using EB tresos Studio.

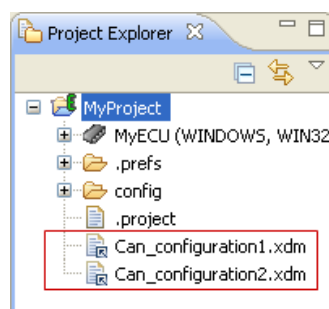

1 Link the XDM files you want to compare to your project

To link a file:

- In the *Project Explorer*, select an existing project or folder. If you do not have any project loaded into EB tresos Studio, you may alternatively create a new configuration project.
- Right-click the selected or newly created project in the *Project Explorer*. A context menu opens up.
- Select **New** → **File**.
The New File dialog opens up.
- Click the button **Advanced**>>.
The lower section of the **New File** dialog expands.

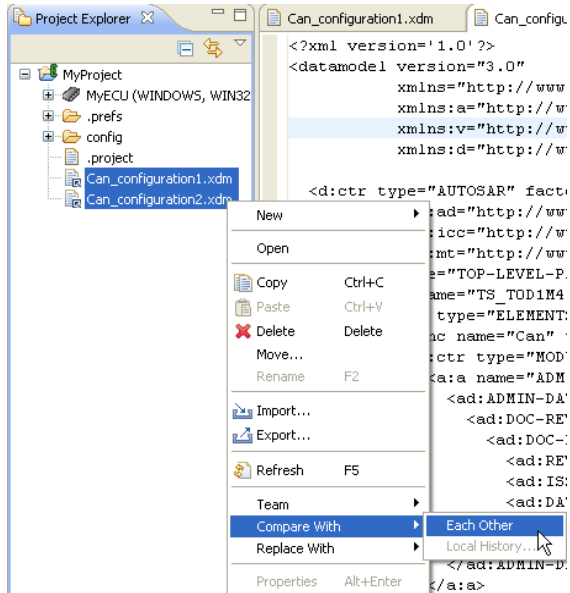

- Select **Link to file in the file system**.
- To select the XDM file you want to link to your project, click **Browse**
- Click **Finish** to add the selected file to your project.
- Repeat these steps for any files you want to compare.
- The files are now linked to your project in the *Project Explorer* view.

2 Open the *Compare* editor for XDM files

- In the *Project Explorer* view, select both files you want to compare.
- Right-click the selected files. A context menu opens up.

- Select **Compare With** → **Each Other**.
The *Compare* editor for XDM files opens up.

For more information about the *Compare* editor for XDM files, refer to the EB tresos Studio user's guide.
